

# Sencha ExtJs

To Do application with Sencha ExtJs 6.2.1

# Sencha

- ▶ Touch & ExtJs : mobile & desktop
- ▶ Since version 5.0 : integration of both
- ▶ Commercial use : license required
  - ▶ Minimum 5 developers : \$4,475 (standard) - \$9,475 (premium)
  - ▶ only developers need license, not the customer

# Installation

- ▶ not necessary, recommended : Sencha Cmd
  - ▶ code generation, compiler, packaging, tuning, Cordova/PhoneGap, ...
- ▶ Download & install Sencha Cmd
- ▶ create namespace (optional)
  - ▶ common framework copies
  - ▶ common code
  - ▶ common third-party packages
- ▶ create app
  - ▶ from scratch
  - ▶ use Sencha Cmd

# Sencha Architect

- ▶ visual tool for building all screen elements

The screenshot displays the Sencha Architect interface. On the left, a tree view shows the project structure under 'My Grid Panel', including 'String', 'Number', 'Date', 'Boolean', and 'MyGridView'. Below this is a 'Config' section for 'My Grid Panel Ext.grid.Panel' with a search filter and an 'Add' button. A 'Property Value' table is visible, with 'Ext.grid.Panel' selected. The main workspace shows a grid panel with a scroll bar. The grid contains three rows of data:

String	Number	Date	Boolean
cell	10,000.00	08/03/2012	true
cell	10,000.00	08/03/2012	true
cell	10,000.00	08/03/2012	true

Dimensions are shown as 90x92. A 'My Panel' label is positioned at the bottom right of the grid. On the right side, a properties panel is open, showing options for 'autoScroll', 'Dock in parent' (set to '(none)'), and 'Select a layout' (set to 'auto').

# Hands-on

- ▶ create workspace :

- ▶ sencha generate workspace `d:\jsapp2`

directory

- ▶ create app :

- ▶ sencha -sdk `D:\jsapp\ext-6.2.1` generate app `ToDo` `d:\jsapp2\todo`

app name

directory

folder with Sencha framework components

- ▶ start build-in webserver in development mode :

- ▶ browse to the app folder `d:\jsapp2\todo`

- ▶ sencha app watch

- ▶ Or, build a test version :

- ▶ sencha app build testing

- ▶ available in `<namespace dir>\build\testing\<app name>`

# Code concepts

- ▶ all javascript
  - ▶ no tags
  - ▶ all is in javascript files
  - ▶ directory structure follows class-naming
- ▶ object oriented
  - ▶ define classes that extend from Sencha's framework classes
  - ▶ create components, use Sencha or own class
- ▶ package or dynamically loaded
  - ▶ all can be dynamically loaded
  - ▶ better : let Sencha cmd build the app (1 file app.js)

# MVC or MVVC concept

- ▶ MVC :

- ▶ model : data record → field definitions & (optionally) data
- ▶ view : a screen component to show data (table, form, text, ...)
- ▶ controller : contains functions → to handle events
  - ▶ controller is application-wide

- ▶ MVVM :

- ▶ model : idem mvc
- ▶ view : idem mvc
- ▶ viewmodel : data specific for the view
- ▶ viewcontroller : functions
  - ▶ controller specific for the view

# Code fragments : grid's model

```
Ext.define('ToDo.model.ToDo', {
    extend: 'Ext.data.Model',
    alias: 'model.todo',

    fields: [
        /*
         * The fields for this model. This is an Array of Ext.data.field.Field definition objects or simply the field name.
         * If just a name is given, the field type defaults to auto.
         */

        { name: 'ID', type: 'number' },
        { name: 'Description', type: 'string' },

        { name: 'Active', type: 'boolean', defaultValue: true }
    ],

    idProperty: 'ID'
});
```

# Code fragment : proxy

(for REST connection to Caché)

```
Ext.define('ToDo.proxy.BaseAjax', {
  extend: 'Ext.data.proxy.Ajax',
  alias: 'proxy.todo-ajax',
  requires : [
    'Ext.data.reader.Json',
    'Ext.data.writer.Json'
  ],
  actionMethods: {
    create: 'POST',
    read: 'GET',
    update: 'POST',
    destroy: 'POST'
  },
  api : {
    read: 'rest/api/todo',
    create: 'rest/api/todo',
    update: 'rest/api/todo',
    destroy: 'rest/api/destroy'
  },
  username: 'demo',
  password: 'demo4CUG',
  withCredentials: true,
  headers : {
    'Content-Type': 'application/json'
  },
  reader: {
    type: 'json',
    rootProperty: 'children'
  },
  paramsAsJson: true,
  idParam : 'ID'
});
```

# Code fragment : store

contains locally loaded data

```
Ext.define('ToDo.store.ToDo', {
    extend: 'Ext.data.Store',

    alias: 'store.todo',

    requires: [
        'ToDo.model.ToDo',
        'ToDo.proxy.BaseAjax'
    ],

    model: Ext.define("Todos", {extend: 'ToDo.model.ToDo'}),

    proxy: {
        type: 'todo-ajax'
    }
});
```

# Code fragment : grid view

shows data in a dynamic table

```
Ext.define('ToDo.view.main.ToDoList', {
    extend: 'Ext.grid.Panel',
    xtype: 'todolist',
    requires: [
        'ToDo.store.ToDo',
        'Ext.grid.column.Check'
    ],
    title: 'ToDo items',
    store: {
        type: 'todo'
    },
    autoLoad: true,
    columns: [
        {text: 'ID', dataIndex: 'ID', flex: 1, hidden: true},
        { text: 'Description', dataIndex: 'Description', flex: 8 },
        { text: 'Active', dataIndex: 'Active', flex: 1, xtype: "checkcolumn" },
        { text: '',
          xtype: 'actioncolumn',
          width: 24,
          items : [
              {
                  icon: Ext.getResourcePath('images/delete.png', 'shared'),
                  tooltip: 'Delete this',
                  menuDisabled: true,
                  sortable: false,
                  handler: function(pGrid, pRowIndex, colIndex) {
                      try { ... }
                      catch(err){ ... });
                  }
              }
          ]
        }
    ]
});
```

# Code Fragments : Form

```
{
  xtype: 'form',
  title: 'Create ToDo',
  reference: 'todoform',
  frame: true,
  layout: {
    type: 'hbox',
    pack: 'center',
    margin: '0 20 0 20'
  },
  margin: '20 0 20 0',
  padding: 20,
  defaults: {
    labelWidth: 80
  },
  ...
}
```

```
...
  items: [
    {
      xtype: 'textfield',
      fieldLabel: 'Description',
      name: 'Description'
    },
    {
      xtype: 'checkbox',
      fieldLabel: 'Active',
      name: 'Active',
      inputValue: 1,
      uncheckValue: 0
    },
    {
      xtype: 'button',
      text: 'Save',
      itemId: 'Save_btn',
      listeners: {
        click: 'onSaveClick'
      }
    }
  ]
},
```

# Code fragment : main part

- ▶ class is defined → define object with xtype

```
items: [{
  title: 'Home',
  iconCls: 'fa-home',
  // my todo grid
  xtype: 'todolist',
  flex: 1
}, {
  title: 'Users',
  iconCls: 'fa-user',
  xtype: 'mainlist'
}, {
  title: 'Groups',
  iconCls: 'fa-users',
  bind: {
    html: '{loremIpsum}'
  }
}, {
  title: 'Settings',
  iconCls: 'fa-cog',
  bind: {
    html: '{loremIpsum}'
  }
}]
```
